A Layperson's Perspective: Our Brain

Series of free classes at library explores the role of our brain in our lives

Are our genes our destiny or is there more to it than that? What role does our environment play in what we can become? These questions and more will be answered in Nature versus Nurture, the first in a free six-week series of classes taught at Pocatello's Marshall Public Library by Dr. Robert Croker, Ed.D. Dr. Croker is chair of the Department of Human Resource Training and Development at Idaho State University.

Classes will be Tuesdays at 6:30 p.m. beginning February 7, 2012 and continuing through March 13, 2012 at Marshall Public Library, 113 South Garfield Avenue. Each presentation will be between one and a half to two hours in length. Other topics in the series include Gender and the Brain, Memory, Emotions, Stress, and Alzheimer's Disease.

No registration required. Call the Library at 232-1263 ext. 21 for more information.
